

Hybrid Power Solutions

## + UPGRADES

The perfect **add-ons** for the Batt Pack Energy & the Batt Pack Energy XP.

### COLD WEATHER PACKAGE

The Cold Weather Package is recommended for situations where charging will be required in outdoor winter conditions (consistently below  $-5^{\circ}\text{C}$ ). The internal heating system warms up batteries before and during charging to maximize power and energy output, while also preventing damage. The Cold Weather Package is a fully automated and built in system that is compatible with both the Batt Pack Energy and Batt Pack Energy XP.

### VEHICLE CHARGING KIT

The Vehicle Charging Kit allows you to charge on the go. Compatible with almost any 12 or 24 VDC vehicle, this kit allows you to charge your system while you drive to your work site. The built in Vehicle Charging Kit auto regulates to sense when the vehicle is off to ensure it does not deplete the vehicle's battery. The minimum charge time from empty is 4h.

### SOLAR CHARGING KIT

The Solar Charging Kit allows you to harness the power of the sun. With this kit, you can plug in any solar panel with 0-41V output ( $<150\text{W}$ ). The Solar Charging Kit is built in, and charges at a maximum of 125W. The approximate time for a full charge is 20h of sunlight from empty.

### EXTENDED RANGE PACKAGE

The Extended Range Package is recommended for situations that require more power and more run time. With 50% more run time, the Extended Range Package increases the useable energy from 2.5 kWh to 3.8 kWh. It is offered as an upgrade option on the Batt Pack Energy, and is included standard on the Batt Pack Energy XP.

**ALL UPGRADES MUST BE SELECTED WHEN PURCHASE ORDER IS PLACED,  
PRIOR TO MANUFACTURING.**

UPGRADES CANNOT BE ADDED ON AFTER THE FACT.
